

# Power BI KPI Documentation - Logistics ERP

---

## 1. Financial KPIs

### Gross Revenue

DAX Formula:

Gross Revenue = SUM('logistics\_erp'[Order Value])

Explanation:

This measure calculates the total revenue generated from all orders. It sums the Order Value column across the dataset.

### Net Revenue

DAX Formula:

Net Revenue = [Gross Revenue] \* 0.9

Explanation:

This applies a 10% assumed discount to gross revenue to estimate actual earnings after discounts.

### Profit

DAX Formula:

Profit = SUMX('logistics\_erp', [Order Value] - ([Unit Cost] \* [Order Qty]))

Explanation:

Calculates profit per row and aggregates it. It subtracts total cost from total sales value.

### Margin %

DAX Formula:

Margin % = DIVIDE([Profit], [Gross Revenue])

Explanation:

Represents profitability as a percentage of revenue.

### Cost-to-Revenue Ratio

DAX Formula:

Cost to Revenue Ratio = DIVIDE(SUMX('logistics\_erp', [Unit Cost] \* [Order Qty]), [Gross Revenue])

Explanation:

Measures how much cost is incurred for each unit of revenue.

## 2. Customer KPIs

### Customer Lifetime Value

DAX Formula:

CLV = SUM('logistics\_erp'[Order Value])

Explanation:

Total revenue generated from a customer over time.

### Recency

DAX Formula:

Recency = DATEDIFF(MAX('logistics\_erp'[Order Date]), TODAY(), DAY)

Explanation:

Measures days since last purchase.

### Frequency

DAX Formula:

Frequency = COUNT('logistics\_erp'[Order ID])

Explanation:

Counts number of orders per customer.

### Monetary

DAX Formula:

Monetary = SUM('logistics\_erp'[Order Value])

Explanation:

Total money spent by customer.

### Churn Flag

DAX Formula:

Churn = IF([Recency] > 90, 1, 0)

Explanation:

Flags customers inactive for more than 90 days.

## 3. Inventory KPIs

### Inventory Aging

DAX Formula:

Inventory Aging = DATEDIFF([Opening Date], TODAY(), DAY)

Explanation:

Calculates how long inventory has been stored.

## **Inventory Velocity**

DAX Formula:

Inventory Velocity =  $\text{DIVIDE}(\text{SUM}([\text{Issued Qty}]), \text{AVERAGE}([\text{Closing Qty}]))$

Explanation:

Measures how fast inventory is sold or consumed.

## **4. Logistics KPIs**

### **OTD**

DAX Formula:

OTD % =  $\text{Delivered Date} \leq \text{Expected Delivery}$

Explanation:

Measures percentage of orders delivered on time.

### **Delivery SLA**

DAX Formula:

Delivery SLA =  $\text{AVERAGEX}(\text{DATEDIFF}(\text{Dispatch Date}, \text{Delivered Date}))$

Explanation:

Average delivery time across shipments.
