

Phase 6 – Executive Power BI Solution

CEO Dashboard

CEO Dashboard: The CEO dashboard focuses on high-level KPIs such as revenue growth, profitability, customer satisfaction, and strategic trends. It provides a consolidated view for quick decision-making. Visuals include KPI cards, trend lines, and executive summaries that highlight business performance over time.

CFO Dashboard

CFO Dashboard: The CFO dashboard is designed for financial monitoring. It includes metrics like revenue, cost, profit margins, cash flow, and budget vs actual comparisons. Visualizations include financial statements, variance analysis charts, and forecasting models to support financial planning.

COO Dashboard

COO Dashboard: The COO dashboard tracks operational efficiency. It includes metrics such as order fulfillment rate, delivery time, and operational costs. It helps in identifying bottlenecks and improving process efficiency using bar charts and performance KPIs.

Warehouse Dashboard

Warehouse Dashboard: This dashboard focuses on inventory levels, stock movement, and warehouse efficiency. It includes KPIs like total stock, stock aging, and low stock alerts. Heatmaps and tables are used to identify inventory distribution.

Procurement Dashboard

Procurement Dashboard: The procurement dashboard analyzes supplier performance, purchase costs, and lead times. It helps optimize procurement strategies using vendor comparison charts and cost analysis visuals.

Sales Dashboard

Sales Dashboard: The sales dashboard tracks sales performance, revenue trends, and customer segmentation. It includes KPIs such as total sales, sales growth, and top-performing products using line charts and bar charts.

Logistics Dashboard

Logistics Dashboard: This dashboard focuses on shipment tracking, delivery performance, and logistics efficiency. It includes KPIs such as on-time delivery rate and average delivery time.

Inventory Dashboard

Inventory Dashboard: The inventory dashboard provides insights into stock levels, turnover ratios, and demand forecasting. It helps maintain optimal inventory levels.

Risk Dashboard

Risk Dashboard: The risk dashboard identifies business risks such as supplier risk, operational risk, and financial risk. It uses risk scoring models and visual alerts.

Executive Summary Dashboard

Executive Summary Dashboard: This dashboard combines key insights from all dashboards into a single view. It provides a quick overview of business performance for executives.

Mandatory Features Implementation

Drill-through: Enables navigation to detailed reports from summary visuals.

Drill-down: Allows users to explore hierarchical data levels such as year → month → day.

Bookmarks: Used to create interactive storytelling and navigation within reports.

Dynamic Tooltips: Provides additional contextual information when hovering over visuals.

Dynamic Titles: Titles change based on filters and selections.

Field Parameters: Allows switching between dimensions and measures dynamically.

Calculation Groups: Used to optimize and manage multiple calculations efficiently.

Row Level Security (RLS): Restricts data access based on user roles.

Incremental Refresh: Improves performance by refreshing only new data.

Composite Models: Combines multiple data sources for advanced analytics.

Dynamic Measure Selector: Allows users to switch between KPIs dynamically.

Dynamic Currency Conversion: Converts values based on selected currency.

Scenario Analysis: Enables what-if analysis for forecasting and decision-making.
